This air conditioner design has been certified by the Canadian Standards Association for installation in recreation vehicles.

**SERVICE CALLS & QUESTIONS**
Location and phone numbers of qualified Service Centers can be found at our website http://www.atwoodmobile.com or call 866-869-3116 to locate a Service Center.

---

**GENERAL INFORMATION**

**I. PURPOSE**
This Atwood AirCommand air conditioning unit is designed for installation on the roof of a recreational vehicle to provide cooling with 13500 models and cooling/heating with 15000 models.

- The roof must be capable of supporting the weight of the unit which is 99lbs (45Kg).
- The absolute minimum thickness of the roof must not be less than 1 inch (25mm).
- The maximum thickness of the roof must not exceed 5 inches (125mm).
- Trimming of the ductwork and/or bolts may be necessary depending on the roof thickness

It is important that the unit is installed properly and according to the recommended guidelines.

**II. ENSURING EFFECTIVE OPERATION**
The effectiveness of the air conditioner is dependent on several factors e.g. size and heat load of the vehicle. When an Atwood unit is installed Atwood assumes that the vehicle is well insulated with 1 inch (25mm) foam minimum in all walls and roof, that the windows are of moderate size and protect the windows from direct radiation.

Ensure that the installation instructions have been properly read and understood. Installation must conform to Local wiring codes and regulations or, in the absence of local codes, the Standard on Recreational Vehicles, NFPA 1192, and National Electrical Code NFPA 70.

DO NOT attempt to modify or add components to the installation procedure.

This equipment must only be serviced by a licensed refrigeration mechanic to maintain warranty coverage.

If your installation varies from the method outlined please contact Atwood Mobile Products, LLC for specialty advice.

---

Atwood will not be held responsible for problems relating to incorrect or improper installation methods.
INSTALLATION PARTS LIST

MAIN COMPONENTS
1) Atwood AirCommand Rooftop Air conditioner
2) Roof Seal Gasket 2 Pcs
3) Adapter
4) Extension Duct
5) Brace Assembly
6) Plenum
7) Plenum Filters x2

FITTINGS & FIXTURES
8) M8 Bolts x 4
9) Hold Down Bars x 4
10) Plenum Cover Screws x 4
11) Self Tapping Screws x 6

INSTALLATION POSITION

Minimum 1" clearance from side grilles to any obstruction

Minimum 8" clearance from rear grilles to any vertical face, 4" to any 45 degree face.
Unit Installation (Non-Ducted)

Before beginning, mark out the position of the unit considering the following important requirements:
- The air conditioner should be situated as centrally as possible on the vehicle, to ensure even air distribution.
- The front of the unit **MUST** face the direction of travel; failure to follow this instruction will result in damage to the condenser fans.
- If the vehicle is over 23' in length, or has an unusually high heat load (see General Operating Information section regarding expectations about insulation etc.), Atwood would recommend 2 or more units to cool effectively.
- When considering the installation position remember to check for clearance around the plenum inside the vehicle.
- Avoid an installation position where a bulkhead, cupboard or light fitting could interfere with the discharge air flow from the plenum.

**WARNING:** It is important that the unit is never more than 5° from the horizontal and the rear of the unit should never be higher than the front.
- Contact Atwood if your installation differs significantly.

**ASSESS ROOF STRENGTH**
- The roof members **MUST** be strong enough to support the weight of the unit 99 lbs (45kg) without any roof deflection that will cause “pooling” of water around the unit. Contact your RV manufacturer to confirm the max load the roof is able to handle. If in any doubt consider the use of an external “H” frame.
- If the roof does not have an existing hole one must be cut. Cut from the roof then use the roof hole as a guide to cut through the ceiling. Contact your RV manufacturer for the best method to cut through the roof.
- The square hole in the roof (356 x 356mm, 14” x 14”) **MUST** be boxed up with minimum 3/4 inch square timber to provide a structure strong enough to withstand the compression of the installation bolts. This is also to ensure that air in not drawn from the roof cavity (Fig 3 & 4). Remember to leave access for wiring.
- Longitudinals **MUST** be fixed securely to the transverse roof members to transfer load (see Fig 3).
WARNING
There may be electrical wiring located between the roof and ceiling. Ensure that power is properly disconnected at the supply (mains and/or battery). Failure to do so may result in personal injury or death.
TIP: Always use crawl boards across the roof to avoid damage.

POSITION UNIT ON ROOF
- Remove the air conditioner from the carton.
- Position the unit over the gasket so that the corners of the square hole in the RV roof line up with the corners of the square hole underneath the air conditioner (Fig 6).
TIP: Have one person inside the RV looking through the hole while the other is on the roof adjusting the position of the unit.

The unit weights approximately 99 lbs (45kg). Ensure a two person lift or use a mechanical hoist to avoid the risk of injury.
- DO NOT slide the unit on the roof, this may damage the gasket and result in leaks.
- Four M8 mounting holes on the chassis underneath the air conditioner will line up with the corners of the square roof hole (Fig 7).

ATTACH ADAPTER TO UNIT
- Screw adapter to the underside of unit with the 4 screws provided (this step can also be done before the unit is positioned on the roof but be careful not to damage while fitting).
- The adapter will only fit one way, be careful to ensure adapter is positioned correctly (Fig 8) and avoid affixing back to front.

CONNECT ELECTRICAL SUPPLY
Installation must conform to local wiring codes and regulations or, in the absence of local codes, the Standard on Recreational Vehicles, NFPA 1192. and National Electrical Code NFPA 70.
- Connect power supply to lead from unit
- Note:
  Brown (on unit) to Black or Red – Hot
  Blue (on unit) to White – Common
  Yellow/Green (on unit) to Green - Ground

WARNING
Ensure that power is properly disconnected at the supply (mains and/or battery). Failure to do so may result in damage to the unit and personal injury or death.
COC-1 Self Contained Power Connector Installation Instructions
For 2 Wire Cable With Ground Applications

The 2-circuit-with-ground connectors will splice non-metallic-sheathed cable in the following wire ranges and types:

<table>
<thead>
<tr>
<th>Wire Range AWG</th>
<th>Order No.</th>
<th>Optional Hand Tool</th>
<th>Optional Bench Mount Tool</th>
<th>Optional Bench Arbor Press</th>
<th>Housing Color</th>
</tr>
</thead>
<tbody>
<tr>
<td>12-14</td>
<td>19045-1000 (COC-1)</td>
<td>9285-0074 N/A</td>
<td>64006-0200</td>
<td>White</td>
<td></td>
</tr>
</tbody>
</table>

Reference Information
UL File Number: E182087,
CSA File Number: LR18689-C53
NEC Article: 550, 551, and 545
HUD Section: 3280.801
Current: 20A, Voltage: 300V

Installation Procedure:
1. Carefully strip and prepare the wires to the configuration as shown in Figure 1 using helpful hints shown in photographs of Figure 2.
2. Hold the clear strain relief cover with bottom facing upward as shown in Figure 3.
3. Lay wire into locator slots, making sure the black wire is placed into the polarization slot as shown in Figure 3.
4. Press the cable sheath into the integral strain relief slot as shown in Figure 3. Trimming of ground wire and possibly others will be necessary. Wires must not extend beyond the locators as shown in Figure 4!
5. While holding the strain relief cover, position the housing’s hinge posts into the hinge slots and press down until both lock into place as shown in Figure 4.
6. Close the strain relief cover and housing by hand. Place the connector assembly into Molex tool (preferred) as shown in Figure 5. Squeeze the tool until the connector bottoms out and the locking latches engage on both sides. OR alternately, squeeze the top and bottom closed with tongue and groove pliers as shown in Figure 5.1. Pliers must be a minimum of 10" long. Squeeze firmly on both sides, squarely across the connector between ribs A and B to ensure wires seat completely into slots.
7. Inspect the connector to ensure the wires have been properly engaged into the housing assembly contacts. A properly terminated wire is fully seated into its proper slots with no significant bow of the cover. If the wires extend past the insulations tops, the wires must be re-terminated with a NEW CONNECTOR. Once the cover has been closed the connector cannot be re-used. Failure to comply with this procedure may result in the failure of the connector.
8. Mating and un-mating the completed connector is illustrated in Figure 6.
FIG. 3
Load cable into strain relief.

FIG. 4
Attach housing to strain relief.

FIG. 5
Attaching housing assembly to strain relief cover with hand tool.

FIG. 5.1 Alternately, clamp connector with tongue & groove pliers, squeezing squarely and firmly between ribs A and B.

FIG. 6
To release the connector system, depress both mating latches at the same time and pull the connectors apart. To reconnect, simply re-mate the connectors and slide them together until mating latches lock.

"Hermaphrodite" part mates with itself.
ASSESS ROOF THICKNESS
- Measure the roof thickness and consult the table across to check if adjustments to the hold down bolt and duct length are required.

Failure to cut the duct properly can result in an incorrect seal which will adversely affect the units performance

<table>
<thead>
<tr>
<th>Roof Thickness - Inch (mm) – Include ‘H’ frame if used.</th>

</tr>
</tbody>
</table>

ASSEMBLE DUCT
- Thread a hold down bar onto the M8 bolt and push the bolt almost all the way into the hole in each corner of the brace (Fig 9)
- Leave a .40 inch gap between the hold down bar and the recess in the plastic brace. This will allow for easier engagement with the four corresponding threaded holes in the unit.
- Turn the assembly over and add the extension duct to the top of the assembly (Fig 11).
- Take care to avoid tearing or ripping the duct apart.

When attaching the duct to the unit take care to ensure it forms a tight, unbroken seal that doesn’t allow discharge air to escape.

Fig 9: Insert the four M8 bolts and hold down bars into the corners of the brace

Fig 10: Fit the extension duct onto the brace assembly ensuring a tight, sealed fit
ATTACH DUCT TO UNIT

- Raise the brace assembly and slip the extension duct over the outside diameter of the adapter underneath the rooftop unit. (Fig 11 & 12).

When attaching the duct to the unit take care to ensure it forms a tight, unbroken seal that doesn’t allow discharge air to escape.

- Engage and tighten the four M8 bolts with the threaded inserts in the rooftop unit.
- Recommended tightening torque of the bolts is 7 N.m (5.2 lb-ft). As a rough guide the bolts should be tightened so that the unit compresses the roof seal gasket to approximately half its height.
- As the bolts are tightened ensure that the hold down bars slot into their recesses in the brace (Fig 12).

ATTACH PLENUM COVER

- Connect the main cover of the plenum to the duct by attaching the blue suspension cord to the lug on the inside of the cover (Fig 13). Reach into the unit, grab the control cable plug and pull down to -This will allow you to use two hands to connect the control cable (see Fig 14).
- Connect the key pad control cables together (see below). Be sure that the plug joins the corresponding wire colors together (yellow to yellow, red to red etc.)

Failure to properly plug the control cables together correctly will result in loss of power to display.

Fig 11: Raise the duct assembly up to the roof hole, ensuring the paper extension duct work forms a tight fit around the spigot underneath the unit.

Fig 12: Then engage the four M8 bolts, taking care to ensure the hold down bars slot into their recesses.

Fig 13: Shows the positioning of the lug inside the plenum cover
Pull the suspension cord down from inside the unit and hook it through the lug shown inside the plenum housing. This will allow two free hands to connect the control cables together.
ATTACH PLENUM COVER
- Secure the main plenum cover to the duct assembly with the 4 screws provided (Fig 15).

TIP: It is important that these screws are not over tightened otherwise the plenum may crack.
- Remove the filter elements by pulling them out of the plenum, and use the six self-tapping counter sunk screws to secure the covers edges to the vehicle ceiling (Fig 16). In some instances a very small pilot hole may need to be drilled to guide the screws into place.
- Replace the return air filters by sliding them into the plenum until they click into place
- Your installation is now complete.

INSTALLATION IS NOW COMPLETE
OPERATING THE UNIT
1. Turn the power on at the circuit breaker
2. Press the ON/OFF button and press the MODE button to select FAN
3. Cycle through the LO, MED and HIGH fan speeds checking that all speeds run.
4. Set mode to COOL, adjust temp via up/down buttons to approx 6°F (3°C) less than the display temp (i.e. Room temp) compressor will start within three minutes.
5. Set mode to HEAT, similarly set temp to approx 6°F (3°C) above display temp. Compressor will start within three minutes.
After a few minutes the fan will start and warm air will be apparent.
Note: Regardless of the mode selected there will always be at least a 3 minute delay before the compressor starts.

MAINTENANCE
I. Plenum Filters
The plenum filters are the only parts that require routine maintenance. They must be cleaned periodically to ensure that they do not become clogged with dust and other particles and not covered by Warranty.
To clean the two plenum filters, first remove them both from the plenum by pulling them out of the assembly.

Fig 17 shows the plenum filter when removed.
The state of the filters can be ascertained from its appearance, the filters are translucent, and if they appear clogged then they should be cleaned. Generally the filters can be cleaned sufficiently by tapping them together to shake loose the dust and particles trapped inside.

![Warning](image)

**WARNING**
Airborne particles can pose a health risk, particularly to young children and the elderly. Ensure that filters are cleaned in a safe and well ventilated area.
If a more thorough cleaning is required then the filters can be washed out using warm soapy water. Care must be taken to avoid ripping the fabric.
The filters should be cleaned every two weeks or more when in use. Prolonged use, higher concentrations of airborne particles, and various other factors may result in the filters needing to be cleaned more often.
Replacement filters can be ordered directly from Atwood Mobile Products, LLC by calling 866-869-3118.

II. Mounting Bolts
Atwood suggests that the hold down bolts are initially checked for tightness within the first 3 months of installation, and thereafter every 12 months if the vehicle is in constant use.

III. Storage
The air conditioner should be run on a routine basis to ensure the components remain in working order.
If the vehicle is in storage or is to remain unoccupied for an extended length of time it is recommended than the air conditioner is allowed to run uninterrupted for 20-30min once every six months.
**Air Conditioner**

**OPERATING INSTRUCTIONS**

- Turn the unit on by pressing the ON/OFF button once.
- Press the MODE button to cycle through options Cool, Dry, Heat and Fan.

**COOLING**

- Cycle mode button to highlight COOL.
- You may select High, Med, Low, or Auto fan speeds by pressing the fan button. It is recommended that you choose Auto.
- Now select the desired room temperature (herein referred to as SETPOINT) by pressing the TEMP up or down keys, the readout will flash the set point temperature. Keep pressing the button until it flashes your desired set point. In approx. 5 seconds the display will resume reading the actual room temperature. The compressor will have a delayed start usually 3 minutes before unit starts to cool.
  
  Note: Any interruption to the power supply will cause the unit to delay compressor start up.
- For simply re-circulating air, choose the FAN mode. Choose any of the three fan speeds by pressing FAN button. Note: Temperature button is invalid in Fan only mode.

**HEAT** (model 15000 only)

- To heat, press MODE button to highlight HEAT.
- Select desired set point temperature by pressing TEMP buttons up or down. It is recommended that AUTO fan speed by selected.
- After the delay, the compressor will start. Usually the fan will stop and will not re-energize until the heat exchanger has warmed and then the fan will start to blow warm air.
DRY
- The DRY mode is used when the room temperature is close to comfortable but you wish to dehumidify.
- Press MODE button to highlight DRY.
- Set the temperature to desired set point. Note: the fan speed is locked in LOW.
- The compressor will cycle on and off at approximate intervals of 6 minutes to extract moisture from the air.

SLEEP
- With the unit operating in heat or cool mode, press sleep button to highlight the sleep light. The unit over the next hour will automatically raise the set point by 2°F. Conversely in heat mode, the set point will be lowered 2°F.

TIMER
- The timer may be used to turn off the unit in the future (up to 24 hours) OR may be used to turn on the unit up to 24 hours in the future.
- Press TIMER button once and the display will flash. Within 3 seconds, press the timer button until you have set desired time into the future to turn unit off. A subsequent press of the timer button will allow the time to start the unit to be programmed.

LOCKING
- This provides a means of locking in the mode and fan settings. To lock, press temp down key simultaneously with MODE button. Hold for 3 seconds and the lock indicator will light. To unlock, repeat above procedure.

DISPLAY SETTING
- To change readout from Celsius to Fahrenheit or vice versa: Press temp down key simultaneously with the Fan key.

TROUBLESHOOTING

Control Pad will not illuminate when ON/OFF button is pressed
- Check circuit breaker is on
- Control cable may be unplugged between outside unit and inside fascia
- Check power supply to vehicle

Unit does not cool
- Check circuit breaker is on
- Control cable may be unplugged between outside unit and inside fascia
- Check power supply to vehicle

Unit does not heat
- Ensure mode has been switched to heat (check green LED)
- Thermostat set point must be above room temperature
- Note: The compressor has a 3 minute delay before starting
- In very cold conditions the unit will take more time to start producing warm air
- Ensure return air filters are clean
- Operate the unit on high fan speed to obtain maximum capacity
- Ensure all windows, doors, skylights and hatches are closed and curtains/awnings used to reduce heat load, check for adequate insulation in roof & walls

Insufficient cooling capacity
- Contact Atwood service department

An error code is displayed on control panel (E1 to E5)
ATWOOD AIR CONDITIONER LIMITED WARRANTY

Atwood Mobile Products warrants to the original owner and subject to the below mentioned conditions, that this product will be free of defects in material or workmanship for a period of two years from the original date of purchase. Atwood’s liability hereunder is limited to the replacement of the product, repair of the product, or replacement of the product with a reconditioned product at the discretion of the manufacturer. This warranty is void if the product has been damaged by accident, unreasonable use, neglect, tampering or other causes not arising from defects in material workmanship. This warranty extends to the original owner of the product only and is subject to the following conditions:

1. For a period of two years from the date of purchase, Atwood will replace the complete air conditioner if the coils and plumbing leaks due to corrosion. This warranty includes reasonable labor charges required to replace the complete air conditioner.
2. For two years from the date of purchase, Atwood will repair or replace any part defective in material or workmanship. This warranty includes reasonable labor charges, required to remove and replace the part. Service calls to customer's location are not considered part of these charges and are, therefore, the responsibility of the owner.
3. This warranty does not cover items classified as normal maintenance such as cleaning and replacement of filters.
4. In the event of a warranty claim, the owner must contact, in advance, either an authorized Atwood Service Center or the Atwood Service Department. Warranty claim service must be performed at an authorized Atwood Service Center (can be found online @ www.atwoodmobile.com) or as approved by the Consumer Service Department, Atwood Mobile Products, 1120 North Main St., Elkhart, IN 46514 USA. Phone: (866-869-3116).
5. Return parts must be shipped to Atwood “Prepaid”. Credit for shipping costs will be included with the warranty claim. The defective parts become the property of Atwood Mobile Products and must be returned as directed by the Consumer Service Department, Atwood Mobile Products.
6. This warranty applies only if the unit is installed according to the installation instructions, by an authorized service technician provided and complies with local and state codes.
7. The warranty period on replacement parts is the unused portion of the original warranty period or ninety (90) days, whichever is greater.
8. Damage or failure resulting from misuse including failure to seek proper repair service, misapplication, alterations, and water damage are the owner’s responsibility.
9. Atwood does not assume responsibility for any loss of use of vehicle, loss of time, inconvenience, expense for gasoline, telephone, travel, lodging, loss or damage to personal property or revenues. Some states do not allow the exclusion or limitation of incidental or consequential damages, so the above limitations or exclusions may not apply to you.
10. Any implied warranties are limited to two (2) years. Some states do not allow limitations on how long an implied warranty lasts, so the above limitation may not apply to you. This warranty gives you specific legal rights and you may also have other rights which vary from state to state.
11. Replacement parts purchased outside of the original air conditioner warranty carries a 90 day warranty. This includes the part at no charge and reasonable labor charges to replace it.

This Atwood AirCommand air conditioner is designed for use in recreational vehicles for the purpose of cooling the cabin as stated in the “data plate” attached to the air conditioner. Any other use, unless authorized in writing by the Atwood Engineering Department, voids this warranty.
